

## PROGENX REPRO FOR COWS

## ADVANCED REPRODUCTION MANAGEMENT

Breeding Cows undergo significant physiological and hormonal changes leading to and during the reproductive phase. Those changes, together with the stress of high levels of handling and changes to feed, significantly increase Cow requirements for a range of critical nutrients. These nutrients are essential optimising ovulation and embryo health, quality and survival. Designed by Australian experts for Australian conditions, **ProgenX Repro Lick** is a concentrated, low dose powder lick for use with Cows undergoing either AI, ET or paddock joining programs. Also contains advanced Moisture Resistance Technologies.

# PROGENX

## REPRO POWDER LICK

### UNIT SIZE

25 Kg Bag or  
1 Tonne Bulk Bag

### DOSE RATE

Cows: 130 g/h/d  
Ewes: N/A

### METHOD

Deliver Ad Lib  
Via Containers

For Cows. A convenient low dose powder formulation containing a specific blend of minerals, vitamins and carbohydrates essential to Cows during the reproductive phase. Also contains Moisture Resistance Technologies.

### Composition: Nutrient Sources

Inorganic Minerals and/or Mineral Chelates, Vitamins and/or Vitamin Precursors, Vegetable Oil and/or Molasses, Starches and/or Di- and/or Polysaccharides.

### Calculated Analysis (M.F.)

Crude Protein	%	2.05
Crude Fat	%	1.07
Carbohydrate	%	35.37
Calcium	%	13.37
Magnesium	%	8.78
Phosphorous	%	0.42
Sodium	%	2.58

## FAQ'S

**Does ProgenX Repro Lick come in Block form?** No. The reason for this is simple: Loose Lick supplements can provide much better value for money than Blocks because powders have little or no requirement for the use of binders or fillers.

**How do I manage even intake across the mob?** There are a number of ways to optimise even intake. The product should be introduced gradually, by only putting out sufficient product to supply three days dosage at a time. Ensuring the right ratio of containers to animals and the use of mesh to restrict intake are also important techniques. Contact an Accredited A.I.M. Advisor to discuss.

**What sort of container should I use, and how many?** Dedicated troughs are great, but for a low cost solution we suggest old tyres (halved longitudinally), top and/or bottom third of a 205lt drum, or half a plastic 20lt drum. Place containers near water, at the rate of 1 container per 15 Cows.

**Does it matter if ProgenX Repro Lick gets wet?** The moisture resistant technologies used in ProgenX Repro Lick are highly effective at keeping the product dry in wet conditions by forming a thin "weatherproof" crust. However it is critical to drill a few small holes in the bottom of containers to allow excess water to drain away.

**Will it matter if I'm already feeding other supplements?** It may. We assume that if you're using ProgenX Repro Lick, you've already spoken to an Accredited A.I.M. Advisor to ascertain its suitability for your application.

**Is there a quick way to determine how much to put out?** That's easy! Allow a maximum of 130 grams / cow / day, or 13 kilograms per 100 cows per day.

**Is there any time during the year when I SHOULDN'T feed ProgenX Repro Lick?** ProgenX Repro Lick is only designed to be used for the period leading into and including the reproductive event.

### SPECIFICATION SUBJECT TO CHANGE

This custom Vitamin & Mineral Supplement should only be used in conjunction with advice from an Accredited A.I.M. Advisor. The use of the product being beyond the control of the Seller/Manufacturer, no warranties, statutory or otherwise, are expressed or implied, and no responsibility will be accepted by the Seller/Manufacturer for any damage whatsoever arising from its application or use.
